SMART WASTE MANAGEMENT

The company's **intelligent waste management solution** combines smart ultrasonic fill-level sensors that monitor waste in real time and the help of sophisticated software.

It provides both cities and businesses with analyses that can be used for data-based decision making on **optimising waste collection routes, collection frequencies and vehicle loads**.

There is also the opportunity to identify waste containers with a RFID card and install a card reader in the collection lorry.

Scope of smart destination application

**Technology
Sustainability**

Solutions for destinations in the following areas

Type of solution
