Collaborating member of the Smart Destinations Network

GESTDOC360

GestDoc360: the RPA Software Robot created in Madrid that **enables public processes to be robotised and automated** in a simpler way and in compliance with all the current legislation in our country.

GestDoc360 enables the quick robotisation (in compliance with all legal obligations) of all administrative procedures, the processes of electronic headquarters and guarantees regulatory compliance; this is done through a Zero Code programming system, that is, without the need for traditional computer programming, but rather the language of the administrative workers by way of a virtual assistant to develop process robotisation.

GestDoc360 is present in over 100 town and city councils in Spain.
