PAST VIEW

Past View provides a **guided tourist route with smartglasses** (virtual reality glasses), taking visitors through the most emblematic parts of cities like Seville, Barcelona, Granada, Athens and Ephesus. Through this device, which uses virtual reality and augmented reality, users can visit the city's cultural heritage in different eras.

Past View is a complete **sensory experience** that goes far beyond a conventional guide system. It consists of guided routes that allow tourists to see what the spaces they are visiting looked like in different historical eras.

The Past View device, **comprising smartglasses and a touch pad**, allows visitors to dive into the past through virtual reconstructions and augmented reality technology, bringing them closer to the historical areas in an immersive way. Thanks to **movement sensors**, users can view panoramas of the past, comparing them to the present and thus improving their sensory experience of a different, cutting-edge tourist visit.
