WASTE MANAGEMENT

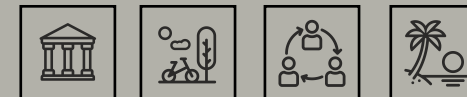

Monitoring the data collected by sensors placed on waste containers and setting up alarms (data analysis about fill levels, temperatures, opening and closing, batteries, fire, spillages, displacement, etc.):

- Improved service operation: **Optimal collection routes** based on fill levels, optimising resources
- **Lower environmental impact:** container overflow detection and optimised collection frequency
- Availability of operational information on the service
- **Savings** of 10-15% of collection costs
- Route optimisation: 3-15%
- Better containers and a **constantly updated inventory:** 3-18%
- **Less time spent** on planning routes and tasks: 5-15%
- **Fuel savings and lower CO₂ emissions:** 5-15%
- **Savings on maintenance costs:** 5-18%
- Reduction of non-productive lost time: 30-60%
- **Increased selective collection:** 0-30% Detection and removal of black spots: areas with overflows and poor waste separation: up to 85%.

Scope of smart destination application

**Technology
Sustainability**

Solutions for destinations in the following areas

Type of solution
