The world's first electric-powered ferry line; Helsingborg: Helsingborg's location on the Öresund strait also allows visitors to come to the city by boat. The ferry company ForSea has not settled for carbon heavy transport alternatives but has gone a step further. ForSea became the first ferry company in the world to make their ferries battery-powered, with the batteries being charged continuously. While previously powered with conventional fossil fuels, the ferries are now charged during the short time when docked at Helsingborg or Helsingör and taking vehicles and passengers to disembark and embark.
