IMMERSIVE VR

Sebka Technology offers a technological tool to municipalities that want to turn their history or heritage into a tourist experience through virtual reality.

Traditional fishing, the history of mining, or future space travel can all be turned into tourist experiences. Thanks to the **construction of a 3D virtual environment**, any past or imaginable scenario can be recreated. By putting on a pair of VR glasses, the tourist enters an immersive experience which transports them in time and space. For example, a coastal village may wish to show how the sea has influenced their way of life for millennia. They can recreate a 2nd century CE Roman boat returning from a fishing trip in 3D, showing what the coastline looked like at the time and the buildings and temples it featured. These experiences take tourists to the heart of the action thanks to immersive VR.
