INFO POINT

A wooden structure with a customisable design. It features a touch screen that users can interact with via information provided by the public body using the product.

This information is made available to residents and visitors through a new communication channel and reference point for people in the area. Concepts such as the municipality's history and coat of arms, what life is like there now, its traditions, what there is to visit, where to eat and what actions are being carried out in relation to the Sustainable Development Goals (SDGs) are some examples of the many options this new method offers for interacting with citizens.

It is a perfect digital, interactive signage solution, through which municipalities can share any relevant information dynamically and visually, thus attracting residents' attention and supporting future decisions.

- **Digital touch screen**

The main aim of this screen is to provide information to users, and to facilitate access to the different public and/or private services within the municipality. Moreover, the option to interact with users through personalised surveys will generate a database of highly valuable information which will provide a base for the municipal corporation to analyse and agree on possible future decisions and actions.

- **Other features included**

- > **Semi-automatic external defibrillator:** a portable device that diagnoses and treats cardiorespiratory arrest, restoring normal heart rhythm through direct current pulses when the heart is fibrillating
- > **Emergency button** to call 112 in case of an emergency or accident Area to charge mobile phones or wheelchairs.

Scope of smart destination application

**Technology
Governance**
