# CYBERSAFE DESTINATION: AN AUDIT ON THE CURRENT STATUS OF CYBERSECURITY FOR A SMART DESTINATION SERVICE

The **audit analyses security requirements and privacy needs, and their level of compliance**. It also evaluates the readiness level of the smart infrastructure and identifies its critical points in order to adapt to the strategy.

The audit involves a test of the technologies' security (communications, administration, sensor maintenance, potential danger of physical handling) and assesses suppliers' management of devices to ensure they are free from vulnerabilities from the manufacturing stage to the installation stage.

Scope of smart destination application	Solutions for destinations in the following areas	Type of solution
