"Tomis" Tablets as an information panel for public use; Matosinhos: Categorized as "street furniture" with a stylish and innovative design, the "Tomis" are "giant tablets" in public spaces and provides locals and visitors with all the necessary arranged information. These devices are installed in Matosinhos and Leça da Palmeira and operate 24 hours a day. The "Tomis" respond to the immediate needs of dwelling, business and provide information about the area's great attractions and offers. These interactive panels of information are a cultural information source as they deliver culinary, heritage and effective assistance with unlimited features and constant updates. The tablets/displays allow a reliable, tailored and personalized experience to all those who ask and look for something different in the city – including where to find the world's best fish.

4.3.2 COLLECTING INFORMATION FOR SMART MANAGEMENT

4.3.2.1 Smart Urban Management: Aalborg; Cork; Essen; Gijón; Palermo; San Sebastián

Smart Port for Integrated Urban Management; Aalborg: Considered Denmark's "smart" port, it is increasingly shifting its focus from water-based solutions to developing shore based solutions, to operate as an inland port with a 360-degree catchment area and intermodal logistics hub. Included in this is a real time, smart management system that allows all operators and users of the port to see, in real time, the traffic, navigation conditions, water levels, etc. thereby increasing safety and efficiency through a data driven, shore-based solution. Port of Aalborg has two roles: as a business and as an integrator. On the one hand, Port of Aalborg is a traditional business, encompassing operations, optimisation, maintenance of infrastructure and commercial rentals. The aim is to increase turnover, secure stable business and unlock and develop the potential of our employees. On the other hand, Port of Aalborg acts as an integrator, promoting collaboration and development of businesses and the local community. Here, the aim is to help raise the employment rate, boost growth, and increase prosperity in the local community.

Smart Gateway for smart solutions and solving challenges; Cork: The Cork Smart Gateway illustrates that Cork is a smart city that embraces digital technologies, and the digital experience is constantly evolving there. It is a collaboration between local government, businesses, academic and research institutes and was launched in 2016 to identify and deploy smart solutions to seize emerging opportunities, solve regional challenges and enhance the reputation of Cork as an attractive place to live, work, visit and invest. Local businesses have been supported and engaged to discuss and explore themes such as technology, data, and digital tools. And particularly the Smart Gateway has provided a forum for enhanced citizen engagement in generating ideas for smart solutions in public service, research collaborations and city development. There is also an ongoing programme through the Smart Gateway to foster digital inclusion, enabling individuals and communities to access digital literacy.
