COGITO INTELLIGENCE PLATFORM (CIP)

A system that enables an exhaustive analysis to be performed on all kinds of texts and documents (internal and external), to search for and organise relevant information, providing useful conclusions. It makes use of artificial intelligence, basing itself on natural learning understanding (NLU) to understand and process concepts. By assigning meaning to words based on context, it increases the efficiency of analysis and automates intelligence processes, overcoming the limitations of conventional keyword-based engines. It makes use of over 500,000 sources and millions of documents - in just three clicks, clients can find the information that is most relevant for them.

What is Cogito Intelligence Platform?

CIP is a comprehensive smart analysis and risk management platform that helps analysts at all the phases of the intelligence cycle. It helps to find the huge volumes of content used by analysts more easily, to mitigate risk, identify critical situations and extract strategic information for analysis.

What sources can CIP work with?

CIP can easily work with a wide range of information sources and data formats (doc, PDF, HTML, txt, etc.), traditional sources (system folders, the internet, intranets, RSS, etc.) and connectors to obtain data from alternate sources (social networks, emails, text messages, news channels), document libraries and knowledge bases. It allows the customisation of information from any volume of unstructured content for open-source intelligence activities and operational risk management. It also manages structured information from conventional relational databases, and can be adapted to obtain and analyse information directly from the monitoring devices.
